

ANY POWER STATION WILL DO

Bob Brown leader of Australia's Green Party and Prime Minister Julia Gillard never hesitated in telling or reinforcing alarmist Green tales.

Bob Brown and Julia Gillard's endless tirade about thermal power stations being dirty and emitting black smoke from their chimneys, polluting the atmosphere, and creating catastrophic global warming (Oops!) '*climate change*' now has hit a new low.

When they tried to foist onto us the photos of Battersea Power Station in London (that has been closed for over thirty years and is only a shell) as being a polluting Australian power station they proved what deceitful and corrupt individuals they and their Green cohorts are.

Photo Used: Battersea Power Station in London closed for thirty years

Terry Cardwell worked 25 years for the *Electricity Commission of NSW* working, commissioning, and operating the various power units. His last commission was at the *Munmorah Power Station* near Newcastle, with four (very large!) 350 MW power generating units.

Look how many different people are involved in this deceit; politicians, the Media and the Green Movement.

What is the deceit?

- First carbon dioxide cannot cause catastrophic global warming, let alone the very small contribution that Man produces each year.

- As politicians both would have known that legislation passed decades before, required all power plants to filter out pollutants.
- They were misidentifying cooling towers as chimneys.
- They were misidentifying condensing steam as a nasty pollutant.
- This justified embracing a new power system that would double or quadruple the costs of electricity in Australia – the cost never discussed.
- They were misidentifying a London Power Station as an Australian Power Station.
- All to encourage an emotional and irrational response from Australians.

So where was the Media – the only organisation that we can trust to tell us the truth? Completely silent of every lie and deception noted above.
