

THE UNENDING TASK OF KILLING SWAMP ISSUES

Introduction

When a swamp issue is brought up in a conversation about global warming, it is difficult not to be dragged into the swamp and get bogged down. It also prevents the conversation looking at the crux of this issue.

This is unproductive and is likely to waste your time.

However, most of us are drawn into the swamp without thinking.

Tony Heller

Tony Heller is a brave man who has been chasing swamp issues for decades. This **Reading 3.5.4** shows how every swamp issue can be explained without resorting to the mythology of Man Made Catastrophic Global Warming.

If you go to Hellers website at www.realclimatescience.com dozens more video than those below. Do not forget that the idea of Man Made Catastrophic Global Warming has been shown to have no logical or scientific basis in the first page of this website; www.greenfacts.com.au.

Enjoy Heller's videos as they show how easy it is to highlight the nonsense behind the myth of "Climate Change"

The following are a small sample (54) of his videos. Although difficult to fit into categories they are divided into the following five groups.

1. This is normal not abnormal.
2. This is not science
3. Bad behaviour
4. Failed predictions
5. Poor responses

Discovering Normal
